MEMORANDUM FOR RECORD

SUBJECT: Trip Report 8-10 December 1969

1. Location and Purpose of Visit:

The undersigned visited the David Clark Company from 8-10 December to discuss status of engineering activity on the S1010 PPA and the financial status of contracts DC-1705, 1706, and 1707. [redacted] from Detachment "G" was also present at these discussions and handcarried with him to the factory samples of hardware that have malfunctioned in recent months.

2. Results of Visit to David Clark Company

A. Immediate steps are being taken to replace all spring spacers in the S1010 PPA neckrings with nylon spacers. Torque tests have been accomplished at the factory and appear optimistic when compared to the existing spring spacer torque valves.

B. New engineering activity was generated during discussions on an improved handpump to be installed in the one-man life rafts. Additionally, Customer # 2 is interested in the installation of an underarm holster

USAF review(s) completed.

to house a weapon. Currently, a velcro-tape-attached holster seems to be the best approach if it does not interfere with the vent-hose connection.

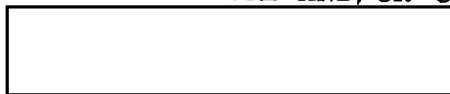

C. The financial status of contracts DC-1705 and 1706 appear to be adequate at this time unless more than three (3) entirely new S1010 PPA's are required for new pilots. Funds covering DC-1707 (tech reps) will be adequate at the present rate.
